Understanding Autonomy in Vehicles

Defining Autonomous Vehicles

Autonomous vehicles (AVs), often called driverless cars, are equipped with systems that allow them to perceive their environment, process data, and make driving decisions without human input. The Society of Automotive Engineers (SAE) standards categorize vehicle automation into six levels:

- Level 0: No automation; human driver controls everything.
- Level 1: Driver assistance (e.g., adaptive cruise control).
- Level 2: Partial automation; vehicle can control steering and acceleration/deceleration but driver

must monitor.

- Level 3: Conditional automation; vehicle handles all aspects under certain conditions, but driver must be ready to intervene.
- Level 4: High automation; vehicle can operate independently in specific conditions or geographies.
- Level 5: Full automation; vehicle operates autonomously in all environments and conditions.

Most current commercial efforts focus on Levels 2 and 3, with some prototypes reaching Level 4 capabilities in limited areas.

Core Technologies Enabling Autonomy

Building a driverless car requires integrating multiple advanced technologies:
